

Smart Engineering

Login Page:

Users can login using either mobile number / email id.

Register Page:

The registration page includes mobile number OTP verification and a dynamically loaded city selection.

Are any additional changes required on this page?

Profile Page:

The profile page currently displays the user's name, phone number, and address.

Should we include an option to update the profile here?

Should customers also be able to edit their information on this page?

Homepage

Product Page:

- This page is dynamically loaded. Products are grouped into categories, and when a category is clicked, the related products are displayed.
- When the Explore button is clicked on a product, it opens the product's detailed description page.
- **Product description page:**
The description page currently shows the product name and its image.

Each product includes an Enquiry and Order button.

Please confirm what additional information needs to be added on this page (for example: features, specifications, more images, pricing, usage details, etc.).

- Inside the product description page includes enquiry & order buttons.
- **Enquiry page:**
This page is used to submit product-related enquiries
- **Order Page:**
This page allows placing new orders for the product.

Project Page:

- Before, the project page had Dairy and Beverage categories. Now, you've asked to show all projects together in one list.
- When a project is selected, it opens the project description page.
- **Project description page:**
Now, the description page displays the project name and its image.
Each project includes an Enquiry and Order button.
Please confirm what information needs to be added to the project description page (for example: overview, features, images, timeline, client details, or any other required content).
- Inside the product description page includes enquiry & order buttons.

- **Enquiry page:**

This page is used to submit product-related enquiries

- **Order Page:**

This page allows placing new orders for the product.

Gallery Page:

Currently, the page shows photos and videos loaded from the server.

Please confirm if this photo and video section should remain as it is.

Support Page:

The support page currently includes Installation, Commissioning, Troubleshoot, Ticket Raise, Spare Order, and AMC. You have now asked to remove the Commissioning and AMC sections.

1. Installation:

- The installation page now dynamically loads data and is categorized into Products and Projects.

- **Product/Project Detail Page (within Installation):**

This page is part of the Installation section and not the main Product or Project page.

Please confirm information needs to be shown here when a Product or Project is selected.

2. Troubleshoot:

Currently, the products are displayed statically.

Should the products be loaded dynamically from the server instead?

When a product is clicked, it should open a detailed troubleshooting page for that specific product.

We need additional information on what will be included inside each detailed product page

3. Ticket Raise:

We now have products that load automatically and are grouped into categories. Submitted complaints are saved in the database.

Should the complaint also be sent by email?

4. Spare Order:

On the spares order page, products are now loaded dynamically and orders can be placed.

Do we need any other updates?

Contact Us Page:

Customer queries can be submitted through the Contact Us page.

Do we need to send them by email as well?
